

ISO Position Paper

Position Title	Global Access Firewall Rules
Position Audience	Princeton IT Professionals
Contact	Information Security Office: InfoSec@princeton.edu
Position Release Date	August 11, 2017
Last Update	Initial posting

Problem Statement

Exposing University systems to the internet significantly increases the risk to University information. This exposure most often occurs through firewall rules which allow access that is greater than is necessary.

ISO Position

Any request for global access (for example, allow source "Any") to any Princeton service requires review and approval by the ISO before implementation.
