

ISO Position Paper

Position Title	Restricted Data Access from Off Campus
Position Audience	Princeton IT Professionals
Contact	Information Security Office: InfoSec@princeton.edu
Position Release Date	August 11, 2017
Last Update	Initial posting

Problem Statement

The Information Security Policy¹ requires the protection of University information that is classified as Restricted or Confidential. Exposing systems that contain Restricted or Confidential data directly to the internet significantly increases the threat to sensitive University information.

ISO Position

All University systems that store or process Restricted or Confidential data should not utilize publicly routable internet addresses (where possible) and must require the use of SRA/VPN to access those systems.
